

SPRING CARE

FLAMING ACRES — DAHLIAS —

How to Plant Dahlias

Simple Steps for a Strong Start

Planting dahlias doesn't have to feel complicated. Once you understand a few basics, it becomes easy—and even a little exciting.

1 START WITH THE RIGHT DEPTH

Dig a hole about **4–6 inches** deep. This gives your tuber enough warmth to sprout while keeping it protected.

2 WHAT IF THERE'S A SPROUT?

You can leave it.

Or gently trim it back to about 1 inch.

If it breaks off, don't worry—your tuber will still grow.

3 HOW TO PLACE THE TUBER

- Lay the tuber on its side (horizontally).
- If you see the "eye," place it facing up.
- Not sure where the eye is? No problem—the plant will find its way!

4 GIVE THEM SPACE

Don't plant too close together.

This gives your plants room to grow, better airflow, and healthier blooms.

5 ADD A STAKE NOW (TRUST ME!)

Place a stake at planting time, right **next to the tuber**.

Prevents accidentally damaging the tuber later.

Your plant will already have support as it grows.

6 COVER AND FINISH

- Cover the tuber completely with soil.
- Keep the soil light and loose (don't pack it down hard).

♥ *And that's it—your dahlia is planted!*

QUICK STEP-BY-STEP GUIDE

A SIMPLE REMINDER

You don't have to do this perfectly. Dahlias are resilient. They want to grow.

Planting is just the beginning—and with these simple steps, you're already on your way!

A Beautiful Beginning

Planting is an act of quiet anticipation. Beneath the surface, something remarkable is beginning—roots will form, shoots will rise, and in time, your garden will be filled with color and life.

Every bloom starts right here... with a careful planting and a hopeful heart.

♥ *Plant today with care. Enjoy tomorrow's abundance.* ♥
